

## Web RTF2HTML Documentation

VBScript Rich Text to HTML conversion utility.

1. Overview
2. Implementation

## 1. Overview

Web RTF2HTML is a powerful utility that allows you to convert Microsoft Rich Text to HTML. The class is implemented via VBScript. It makes converting RTF to HTML as simple as a few lines of code. It uses many principles from Visual Basic, but it is tweaked to function properly in a VBScript environment.

Much leeway has been given to the web developer when creating this tool. This text does not carry too much formatting and is ideally suited to the use of style sheets. It does take the RTF's colour, italics, and bolding, but leaves size and font face to be determined by the style sheet.

## 2. Implementation

Implementing this program is rather simple. Please note that this version is designed to work only in a VBScript environment. ColdFusion and ASP.NET versions are in the works.

1. Include the asp file which contains the Web RTF2HTML code

```
<!-- #include file="rtf2html.asp" -- >
```

2. Instantiate the class

```
Dim myObj  
Set myObj = new rtf2html
```

3. Trigger the rtf2html conversion function

```
strMyVar = myObj.rtf2html(strRTFText)
```

4. Destroy the object to conserve memory

```
Set myObj = nothing
```

If you have any questions / problems with this script, please email [rtf2htmlsupport@infoaccelerator.net](mailto:rtf2htmlsupport@infoaccelerator.net)
